DETAILED ACTION

Allowable Subject Matter

1. Amended claims are allowable over prior art of record. After an updated search was performed, an additional reference, Ellis was identified which read on claim 1 subject matter. Ellis discloses a system, which enables a user to use trick-play operation with a selected broadcast program, such as Rewind (Para 0164-0166). At that point the user may be switched to streaming the identical content previously stored at the server, instead of the regular broadcast transmission. Fig. 11a (Para 0125) shows that an indicator may be placed on the title of a program to be transmitted, shown an EPG screen, which will be cached at the server during broadcast.

However, applicant has argued that the present invention transmits the symbol superimposed on the transmitted broadcast program, not merely displaying the indicator data on the EPG, as taught by Ellis. Applicant has filed (10/16/2006) amended claimed subject that more clearly recites the instant subject matter and overcomes the Ellis reference.

Examiner also cites Gordon & Levesque, which teach systems that caches a broadcast program on a server, remote from the user, as the instant program is being broadcasted. Amended claimed subject matter overcomes the references.
